

ABSTRACT

FLUSHABLE AND ANAEROBICALLY DEGRADABLE FILMS AND LAMINATES

Jean Jianqun Zhao

Saeed Fereshtehkhoh

Jay William Gooch

The present invention relates to thermoplastic materials which are anaerobically degradable in an active sewage sludge. These materials are melt processable into fibers, films or laminates, and are suitable for use in an absorbent article, particularly flushable interlabial products, tampons and pantliners.
